

Framycetin

Your patch tests indicate that you have a contact allergy to framycetin. This means that you should avoid contact with this substance in future.

Framycetin is an antibiotic found in Sofradex ear drops and eye drops

Framycetin is closely related to other antibiotics in the same aminoglycoside group which includes gentamicin and neomycin so these should be avoided too. Gentamicin can be given as an injected antibiotic and it is particularly important to avoid this as you may develop a widespread skin reaction.

The list of products containing this allergen may not be complete and does not include items available outside the UK. Always check the ingredient listing on the product, package or package insert. Ingredient listings may change over time.
